# Section through Dentate Nucleus

- |                                      |                |                                      |                |                                     |   |
|--------------------------------------|----------------|--------------------------------------|----------------|-------------------------------------|---|
| ○ Caudate nucleus                    | A              | ○ Globus pallidus (external segment) | D              | ○ Pontine nuclei                    | K |
| ○ Genu of internal capsule           | B              | ○ Globus pallidus (internal segment) | D <sub>1</sub> | ○ Middle cerebellar peduncle        | L |
| ○ Anterior limb of internal capsule  | B <sub>1</sub> | ○ Anterior commissure                | E              | ○ Dentate nucleus                   | M |
| ○ Posterior limb of internal capsule | B <sub>2</sub> | ○ Putamen                            | F              | ○ Medial geniculate nucleus         | N |
| ○ Anterior horn of lateral ventricle | C              | ○ Optic tract                        | G              | ○ Cingulate gyrus                   | O |
| ○ Body of lateral ventricle          | D              | ○ Subthalamic nucleus                | H              | ○ Pulvinar                          | P |
|                                      |                | ○ Substantia nigra                   | I              | ○ Crus of fornix                    | Q |
|                                      |                | ○ Basis pedunculi                    | J              | ○ Ventral posterior lateral nucleus | R |
